A 21- year old in our focus area found a pregnant dog. She asked her cousin Samantha (who was a Pets for Life client) what she should do for the puppies. Our team was able to give vaccines to 7 puppies, then schedule mom "Blue" and all of the puppies for spay/neuter surgery!

There was not a vaccine clinic held in June and the Care Clinic was under construction, so all medical support was through home visits and outside vets. Our team installed 50 feet of chicken wire and a gate panel to give "Zola" Collier a safe yard to play in on Vermont Ave.

“Tino” (left) was found in Western Heights, blind and wandering lost. The Nelson family brought him to the Care Clinic and we scanned and found a microchip! It was from Florida, implanted 15 years ago. The trace turned out to be a dead-end, so they are going to keep him and let him live out his life with their family. PFL client Nicole (above) tries syringe feeding a kitten she found. The foster dept helped her out with some bottles!

"Karma" (left), getting an exam on her hips from Dr. Ford. She has been limping and painful. Owner was able to get some pain meds as well as donated CBD joint supplements to improve her quality of life. Cindy for the hug/hold!
"Christmas" (right) had a mass on her back examined with Maggie helping!

Pets Helped

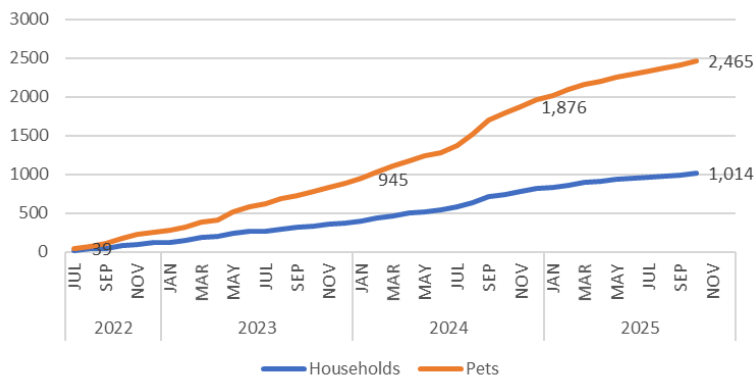

Milo (left) with Kylie getting checked in for neuter surgery. He was the Best Boy! Elvis (above) getting love from Mom before he came to the Spay Shuttle. He said "Thank you, thank you very much."

Our outreach program follows the HSUS Pets for Life model. The focus area was selected based on factors such as income levels, pet population, and access to resources. We are concentrating our efforts in zip code 37921, with particular emphasis on the neighborhoods of Western Heights, Lonsdale, Beaumont, and Mechanicsville.

Pets Helped this
month!

“Chester” (above) came to the Vaccine Clinic at Malcolm Martin park and got his first distemper/parvo shot. “Lilly” (left) was transported to the Care Clinic by PFL. She has an unusual skin/rash condition that several vets are working together to help treat.
